COVID-19 Disinfection Guidance

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. Symptoms include fever, cough, and difficulty breathing/shortness of breath. COVID-19 is spread between people who are in close contact with one another (within about 6 feet), through respiratory droplets produced when an infected person coughs or sneezes, and touching objects that have been contaminated with the virus and then touching your eyes, nose, and mouth with unwashed hands.

According to the Centers for Disease Control and Prevention (CDC), cleaning of surfaces followed by disinfection is a best practice measure for prevention of COVID-19 and other viral respiratory illnesses in households and community settings.

Important Terms:

- **Cleaning** refers to the removal of germs, dirt, and impurities from surfaces. It does not kill germs, but by removing them, it lowers their numbers and the risk of spreading infection.
- **Disinfecting** refers to using chemicals, for example, EPA-registered disinfectants, to kill germs on surfaces. This process does not necessarily clean dirty surfaces or remove germs, but by killing germs on a surface after cleaning, it can further lower the risk of spreading infection.

Effective Disinfectants

Use an EPA-registered disinfectant, such as the Ecolab Peroxide Multi-Surface Cleaner used by campus custodial and dining services. To disinfect, spray or wipe this product onto surfaces and let stand for 4 - 5 minutes before wiping away any residue.

If an EPA-registered disinfectant is not available, a fresh chlorine bleach solution can be used. To make and use the solution: Add 1 tablespoon of bleach to 1 quart (4 cups) of water. For a larger supply, add ¼ cup of bleach to 1 gallon (16 cups) of water. Apply the solution to the surface with a cloth and let stand for 3 to 5 minutes. Rinse the surface with clean water.

Recommended Procedures

Consult the manufacturer’s safety information, instructions, and contact time recommendations for cleaning and disinfection products used. The Safety Data Sheet for the Ecolab Peroxide cleaner is attached.

In general, ensure as much air flow or ventilation as possible when cleaning and disinfecting. Wear disposable gloves, and discard them after each use. Clean hands immediately after gloves are removed.

Hard Surfaces

1. Pre-wash nonporous surfaces if visibly dirty (e.g., doorknobs, counters, faucets, etc.)
2. Wipe or spray the surface with disinfectant. Allow proper contact time as directed on product label (e.g., 4-5 minutes for Ecolab peroxide disinfectant)
3. Wipe surface dry

Electronics

Follow hard surface directions, with the following considerations:

- Follow the manufacturer’s instructions for use of cleaning and disinfection products on electronics.
- Consider use of wipeable covers for electronics where possible.
- If no manufacturer guidance is available, consider the use of alcohol-based wipes or sprays containing at least 70% alcohol to disinfect touch screens. Dry surfaces thoroughly to avoid pooling of liquids.

Linens, clothing, washable items

Wear disposable gloves when handling dirty laundry and then discard after each use. Clean hands immediately after gloves are removed.

- If possible, do not shake dirty laundry. This will minimize the possibility of dispersing virus through the air.
- Clean and disinfect clothes hampers according to guidance above for surfaces. If possible, consider placing a bag liner that is either disposable (can be thrown away) or can be laundered.
